Overall this is an EXCELLENT document. However there is one glaring error: the minimum length hard requirement needs to be at least 12 characters. A hash of only 8 characters is unreasonably easy to crack, especially with the relaxed no special character requirements. A minimum of 8 characters is just totally unreasonable in 2024.

3.1.1.2 Password Verifiers

The following requirements apply to passwords:

   Verifiers and CSPs SHALL require passwords to be a minimum of ***twelve*** characters in length and SHOULD require passwords to be a minimum of 15 characters in length.
