**Subject:** [dig-comments] Comments on NIST SP 800-63-4 second public draft

The first bullet point under the 3rd step on page 19 is unclear. It says that the subscriber "authenticates to the CSP's onboarding function." How is this done? What is the authenticator used to authenticate to the CSP onboarding function, and at which previous step is that authenticator registered/created. Also, when is the activation factor created?
