Comment #	Publication (Base, 63A, 63B, 63C)	Section	Page #	Line #	Comment (Include rationale for comment)	Suggested Change	
1	63C		5	NA	NA	Does the subscriber controlled wallet have a mechanism for the subscriber to track use of data authorized for use by an RP?	Introduce the concept of a subscriber controlled journal of transactions that document when the RP uses the data, what is used and other parties they may be sharing sensitive data (e.g. PII) with.
2	63C		5	NA	NA	Thinking of applications for health care is there a mechanism for emergency use of the wallet or the subscriber to delegate the ability to provide authorization to the data. The example I'm thinking of is a first responder finding a subscriber unconscious and having the ability to contact the subscribers emergency contact to gain access to their medical records.	Introduction of a federated relationship with another subscriber that can act on behalf of the primary subscriber in an emergency or other event where the subscriber is unable to act on their own behalf (e.g. after death).
