Comment #	Publication (Base, 63A, 63B, 63C)	Section	Page #	Line #	Comment (Include rationale for comment)	Suggested Change
1	63-Base	Note to Reviewers	iv	212	<p>Is the concept of user-controlled wallets and attribute bundles sufficiently and clearly described to support real-world implementations? Are there additional requirements or considerations that should be added to improve the security, usability, and privacy of these technologies?</p> <p>Comments: Some comments regarding “attribute bundles” (aka digital credentials) and “user-controlled wallets” to “support real-world implementations.” In particular, what if we want to expand the same concept out to a collection of “attribute bundles” to federate/authenticate? Analogous to using different wallets for different occasions in the physical form, except now you don’t have to transfer your IDs. Is there already a name for this? If not, would it be helpful to have a name and introduce signatures for these collections in addition to signatures for the already bundles?”</p>	Introduce additional model and update Digital Identity Guidelines to support model as needed.
2	63C	Note to Reviewers	iii	179	<p>Is the concept of user-controlled wallets and attribute bundles sufficiently and clearly described to support real-world implementations? Are there additional requirements or considerations that should be added to improve the security, usability, and privacy of these technologies?</p> <p>Comments: Some comments regarding “attribute bundles” (aka digital credentials) and “user-controlled wallets” to “support real-world implementations.” In particular, what if we want to expand the same concept out to a collection of “attribute bundles” to federate/authenticate?
