Comments on SP 800-157:

Line 113: Insert a hyphen between "phishing" and "resistant"

Lines 374-375: List the three classes of activites.

Lines 455-464: I suggest that these be placed as separate bullets (for example) to make the difference/separation very clear (rather than all being in the same paragraph).

Lines 538-540: This begs the question of what alternative ways could/should be used?

Section 3.1.4: There are a lot of references here. Is there some way to reference or give examples of the differences?

Lines 634-642 and 648-651: Note: This is hard to follow without repeated reference to the appropriate section in 800-63B. Is there some way to summarize the differences (e.g., in a footnote)?

Lines 740-741: Where are key-recovery mechanisms discussed?

Lines 974-986 and 995-1008: Pictures would be useful.

Elaine Barker
